Messer makes triple savers

Cost optimisation begins with cost transparency. But don't compare apples with oranges: The amount of saving is important! Messer will be focusing on this important topic at this year's EuroBlech exhibition in Hanover. From 21 to 25 October, at Stand C46 in Hall 13, the largest privately managed industrial gases specialist will be showing visitors how to become "triple savers".

Selecting the right shielding gas for welding, the ideal flow rate and the optimal parameter combination take centre stage in order to minimise reworking and welding time and thus make cost savings. Overall production costs can be effectively reduced by selecting a gas and type of supply appropriate to requirements and by using an optimal shielding gas feed.

With demonstrations by specialists, Messer will show the variegated applications of its products and provide information on the possible savings offered by the use of its ternary mixtures. Moreover, the industrial gases specialist will be offering welding process efficiency evaluations for the first time. Visitors will have the opportunity to take part in personal consultations on this subject at the exhibition stand.

As in previous years, Messer will have a joint presence at EuroBLECH with Messer Cutting Systems and Castolin Eutectic, as well as Jenoptik's laser and laser systems divisions.
